Senior Blockchain Security Engineer (Front-end)

Apply Now

Company: Crypto.com

Location: Taiwan

Category: other-general

The Cybersecurity and Data Privacy team reports directly under the office of the CISO headed by Chief Information Security Officer (CISO) Jason Lau () who has over 23+ years of experience in the cybersecurity space, awarded Global Top 100 CISO, and also serves on the World Economic Forum, International Association of Privacy Professionals and more. The team comprises of multiple functions from Blockchain Security, Operational Security, Security Governance and Compliance and more. We drive a culture of having a growth mindset and being humble to help everyone achieve their potential. Security and Data Privacy Compliance first strategy which has been at the core of our company. The security team helped to drive us to be the first Crypto company worldwide to achieve ISO27001, ISO27701, ISO22301 and PCI:DSS (Level 1) certifications. Extremely detailed third party attested by international audit firm SGS and achieved Adaptive (Tier 4) – the highest level possible for the US National Institute of Standards and Technology (NIST) Cybersecurity Framework and the latest NIST Privacy Framework as well as SOC2 and many other regional certifications like the Data Protection Trust Mark.We are looking for a skilled senior front-end engineer to contribute to a cross Web 2 and Web 3 project.

Responsibilities:

Design, develop, deploy and maintain front-end applications for a cross web2/web3 / (or similar stack): Proficient hands-on experience in and with UX designers and back-end engineers to develop responsive and intuitive user interfaces.

Need to understand and use Web 3

Develop deep understanding of the Blockchain technology (specifically public Blockchain)

Requirements

Degree in Computer Science or Engineering or similar discipline.

6+ years of experience working with front-end technology. Ideally, has been designing, developing and maintaining complex/large/growing front-end.

Proficient in Typescript, or similar front-end stack.

Familiar with the JS ecosystem and well-versed with the various front-end frameworks.

Good understanding of state management such as Redux / Mobx.

Able to troubleshoot and debug issues, and demonstrate a methodical approach to root cause analysis.

Eager for constant learning from both success and failure, remaining open to change and continuous improvement.

Enthusiastic about the future of blockchain.

Curious and comfortable with ambiguity.
